ABSTRACT

Global Streaming Platform Content Analysis

The Global Streaming Platform Content Analysis project focuses on analyzing content available on popular streaming platforms using data visualization techniques. The main objective of this project is to understand trends in movies and TV shows by analyzing information such as genre, release year, country, language, ratings, and content type. The dataset is cleaned and transformed before creating interactive dashboards in Power BI. The dashboard provides clear visualizations, including bar charts, pie charts, line charts, maps, and KPI cards, to present useful insights. It helps identify the most popular genres, countries producing the highest amount of content, yearly growth of movies and TV shows, and content distribution across different platforms. Filters and slicers allow users to explore the data based on different categories and make the dashboard interactive. This project demonstrates how data visualization converts raw data into meaningful information for better decision-making. The insights obtained can help streaming platforms understand audience preferences, improve content planning, and identify market trends. Overall, the project highlights the importance of business intelligence and data analytics in the entertainment industry by presenting complex information in a simple and easy-to-understand format. It also enhances analytical skills and supports data-driven decisions through effective visual representation.

Software Requirements:

Operating System: Windows 10/11

Data Visualization Tool: Microsoft Power BI Desktop

Data Source: CSV/Excel Dataset

Data Cleaning ; DAX (Power Query)and MS Excel

Web Browser: Google Chrome or Microsoft Edge Software for Data Sets

Hardware Requirements:

Processor: Intel Core i3 or higher (Intel Core i5 recommended)

RAM: Minimum 8 GB (16 GB recommended)

Storage: 20 GB free disk space

Display: 1366 × 768 resolution or higher

Internet Connection: Required for downloading datasets and publishing reports

Keyboard and Mouse: Standard input devices

PROJECT TEAM:

1. **24B11DS072 (G.Bhanu Teja)**
2. **24B11DS002 (A.Madhan)**
3. **24B11DS128 (M. Chethan)**
4. **25B21DS008 (K.DURGA)**
